PRAGATHI KANALA

+1 762-699-4762 | pragathi258@gmail.com | linkedin.com/in/k-pragathi258/ | United States

Professional Summary

- Full Stack Software Engineer with 2+ years of experience building enterprise applications in fintech and banking compliance, with strong hands-on skills in Java, Spring Boot, RESTful APIs, Microservices architecture, and AWS cloud infrastructure.
- Experienced across the full stack from building responsive and accessible front end interfaces using Lit Web Components, React.js, TypeScript, and JavaScript to developing and integrating Java back end services, REST APIs, and database solutions using MySQL that support real-world banking workflows.
- Strong team player in Agile and Scrum environments who takes end-to-end ownership of features from requirements and API design through unit testing, code review, CI/CD deployment, and production release with consistent on-time delivery.

Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript, C, C++

Frontend and UI: React.js, Lit Web Components, HTML5, CSS3, ES6+, jQuery, Responsive Design, Accessibility, Figma

Backend and Frameworks: Spring Boot, Spring MVC, Java Microservices, Node.js, RESTful APIs, Apache Kafka, JSON

Database and Tools: MySQL, Git, GitHub, Bitbucket, JIRA, Postman, Docker, VSCode, Visualization Tools

Cloud and DevOps: AWS EC2, AWS S3, AWS Lambda, AWS RDS, AWS VPC, AWS IAM, Kubernetes, EKS, ECS, CI/CD, CodePipeline, CodeDeploy

Systems and Methodologies: Distributed Systems, Microservices Architecture, Agile, Scrum, SDLC, OOP, Data Structures, Algorithms, Debugging

Security: Privileged Account Management PAM, Identity and Access Management IAM, CyberArk

Education

Master of Science in Computer Science — **August 2023 - May 2025**

Florida Institute of Technology **GPA: 3.60/4.00** — *Melbourne, Florida*

Work Experience

Software Engineer — **July 2025 - Present**

Temenos USA Inc. — *Orlando, Florida*

- Designed and implemented configurable UX components for the Temenos Transact Explorer banking platform by extending Lit Web Component modules and integrating Java backend service actions and REST APIs, improving feature delivery across banking customer workflows by 30%.
- Implemented end-to-end service action workflows in Java by connecting front end UI interactions to back end REST API endpoints, validating request and response contracts using Postman, and building comprehensive error handling and edge case coverage across multiple banking customer journeys.
- Debugged and stabilized Java backend API integrations by analyzing request payloads, response mappings, and backend service logs, reducing sprint defect turnaround time by 30% and improving overall production system stability.
- Built metadata-driven UI features including conditional field rendering, step-based navigation, and dynamically rendered form sections driven by backend JSON configuration, reducing time to market for new banking product features.
- Developed a reusable library of configurable UI components including tables, filters, dialogs, and multi-step forms shared across multiple product lines, reducing code duplication and improving delivery consistency across teams.
- Collaborated with product owners, UX designers, and back end engineers on API design, requirement clarification, accessibility standards, and Agile sprint planning, maintaining 100 percent on-time delivery for all assigned sprint tasks.
- Authored technical documentation for service action integrations and conducted code reviews to enforce coding standards, share best practices, and support junior engineers on the team.

Software Engineer — **September 2021 - July 2023**

Mphasis Limited - First Republic Bank — *Bangalore, India*

- Engineered custom risk detection models and Suspicious Activity Report SAR forms on the NICE Actimize platform using AIS Modeler, RCM, Java, HTML, CSS, and MySQL, ensuring full compliance with federal BSA and AML regulatory reporting requirements for First Republic Bank.
- Extended RCM Risk Case Manager and AIS Actimize Integrated Surveillance objects to support First Republic Bank alert workflows, investigation lifecycle stages, case assignment logic, and escalation paths, improving compliance team throughput and investigator productivity.
- Developed AML transaction monitoring and surveillance configurations to detect transaction anomalies, flag suspicious behavioral patterns across customer accounts, and trigger tiered alert escalations in line with First Republic Bank federal AML program requirements.

- Implemented Customer Due Diligence CDD workflows with dynamic customer risk scoring, lifecycle case management, and automated review triggers based on real-time transactional and behavioral data, reducing manual investigation workload and accelerating case resolution.
- Integrated Risk and Compliance Technology RCT components for enterprise-wide risk aggregation across all First Republic Bank business lines, providing a unified real-time view of institutional risk exposure to support compliance decisions.
- Translated regulatory requirements into Actimize platform configurations, custom Java risk scoring models, and optimized MySQL queries, and designed end-to-end test strategies covering data pipelines, alert rule accuracy, and SAR report generation to meet audit standards.
- Recognized by project leadership for process improvements that measurably reduced manual compliance review workload and improved alert-to-resolution turnaround time for the First Republic Bank compliance team.

Projects

Recipe Finder | *Full Stack Web Application - React.js, Node.js, Express, MongoDB, AWS EC2*

- Built a full stack MERN application with ingredient-based search, user authentication using JWT, RESTful APIs with Express, and MongoDB data storage using Mongoose, deployed on AWS EC2.

Handwritten Digit Recognition | *Machine Learning - Python, TensorFlow, Keras, NumPy, OpenCV, Tkinter*

- Designed and trained a Convolutional Neural Network CNN on the MNIST dataset for real-time digit recognition with an interactive Tkinter interface for live user input and instant classification output.

DigiFarmer | *Cross Platform Mobile Application - Flutter, Dart, TensorFlow Lite, LightGBM*

- Built a Flutter application using TensorFlow Lite and LightGBM for crop disease detection, real-time weather insights, and market price recommendations for farmers on Android and iOS.

Certifications

- AWS Cloud Fundamentals, AWS Cloud Content Management, Apache Kafka - Certification with hands-on labs, Mphasis Limited
- RESTful Web Services, Java Microservices, Git, DevOps Essentials - Certification with practical training, Mphasis Limited
- Programming for Everybody Getting Started with Python - University of Michigan, Coursera
- Privileged Account Management PAM, Identity and Access Management IAM, CyberArk Certification - Udemy

Achievements

- Recognized as Outstanding Student of the Year 2025 by the Department of Computer Science, Florida Institute of Technology.
- Received Distinction from the Department of Electronics and Communication during bachelor degree program.
- Awarded first place in the Legal Literacy and Awareness Quiz conducted by NA Global Law School.
