PRAGATHI KANALA

+1 762-699-4762 · pragathi258@gmail.com · linkedin.com/in/k-pragathi258/ · United States

Software Engineer with 3+ years building scalable, high-availability systems in production fintech environments. Strong command of Java, Spring Boot, REST microservices, and AWS. Proven end-to-end ownership from system design through CI/CD deployment and production observability, with consistent measurable delivery impact across large cross-functional teams.

TECHNICAL SKILLS

Languages	Java (primary), Python, JavaScript, TypeScript, C++
Backend	Spring Boot, Spring MVC, Spring Data JPA, Microservices, REST APIs, Apache Kafka, Node.js
Cloud & Infra	AWS (EC2, S3, Lambda, RDS, VPC, IAM), Kubernetes, EKS, ECS, Docker, CI/CD, CodePipeline
Frontend	React.js, Lit Web Components, TypeScript, HTML5, CSS3, ES6+
Databases	MySQL, MongoDB — schema design, query optimization, indexing, data pipelines

EXPERIENCE

Software Engineer | Temenos USA Inc. | Orlando, FL *July 2025 – Present*

Temenos Transact Explorer — Core Banking Platform

- Architected a suite of production-grade Lit Web Component modules integrated with Java Spring Boot APIs for a core banking platform serving millions of daily transactions across 10+ customer journeys; **improved cross-team feature delivery velocity by 30%**.
- Designed a metadata-driven UI rendering engine consuming backend JSON config to dynamically control field visibility, navigation, and form composition — **eliminating all hard-coded UI logic and enabling product changes with zero front-end deployments**.
- Built a shared component library (paginated tables, filter panels, multi-step forms) adopted across 3+ product lines; **cut redundant UI development by ~40% across the engineering org**.
- Resolved systemic Java backend API instability via request payload tracing and response mapping analysis; **reduced sprint defect cycle time by 30% and sustained 100% on-time delivery** across all monitored customer journeys.

Conversational Banking Platform — Service Layer

- Designed and owned the full backend integration layer for a real-time conversational banking app — built low-latency REST microservices (Spring Boot) serving live account, transaction, and profile data; defined data contracts, authentication flows, and error recovery to achieve **consistent sub-500ms API response times under peak concurrent load**.
- Led performance profiling and load-testing across the full service stack; **validated system stability at 2x projected peak traffic** before production deployment.

Software Engineer | Mphasis – First Republic Bank | Bangalore, India *Sep 2021 – Jul 2023*

Enterprise Risk & Data Platform — Java Backend

- Engineered high-throughput Java Spring Boot services processing **5M+ daily financial transactions** — designed multi-dimensional anomaly detection, behavioral pattern analysis, and configurable multi-tier alert triggering across thousands of customer portfolios.
- Designed normalized MySQL schemas with indexing strategies and batched query execution; **reduced analytical dashboard report latency by 40%** under high concurrent usage.
- Architected a rules-based Java workflow engine with state machine transitions, SLA-driven escalation, and dynamic case routing — enabled the ops team to handle **3x higher case volume with no headcount increase**.
- Built real-time Java risk scoring modules with weighted feature evaluation and threshold-based classification; recognized by leadership for **cutting alert-to-resolution time by 25% across a 50+ person program**; extended NICE Actimize AIS/RCM compliance platform integrations to meet regulatory SLAs.

PROJECTS

Recipe Finder — *React.js, Node.js, Express, MongoDB, AWS EC2*
Built and deployed a full-stack MERN web app featuring JWT authentication, REST APIs with Express/Node.js, MongoDB with Mongoose ODM, and a React.js frontend on AWS EC2 — incorporating server-side validation, API rate limiting, and clean separation of concerns for scalability and maintainability.

Handwritten Digit Recognition — *Python, TensorFlow, Keras, NumPy, OpenCV*
Trained a CNN on 60,000 MNIST samples using batch normalization, dropout, and data augmentation for robust generalization; optimized the inference pipeline and integrated it into a real-time Tkinter desktop GUI achieving **sub-100ms end-to-end latency** on standard hardware.

DigiFarmer — *Flutter, Dart, TensorFlow Lite, LightGBM*
Architected a cross-platform Flutter app (Android & iOS) with TensorFlow Lite on-device inference for real-time crop disease classification in offline-first rural environments, a LightGBM model for market price prediction, REST-based weather integration for contextual recommendations, and a clean repository-pattern architecture for maintainable data separation.

EDUCATION

M.S. Computer Science · Florida Institute of Technology, Melbourne, FL · GPA: 3.60 / 4.00 *Aug 2023 – May 2025*
Outstanding Student of the Year 2025 — Dept. of Computer Science, Florida Institute of Technology

CERTIFICATIONS

Anthropic (Apr 2026): Introduction to Model Context Protocol · Building with the Claude API · Claude Code in Action
Udemy (2025–2026): CyberArk with IAM & PAM · Identity & Access Management · Privileged Account Management
Mphasis Internal: AWS Cloud Fundamentals · Apache Kafka with Hands-on Labs · Java Microservices · DevOps Essentials
